Before Code Fixing

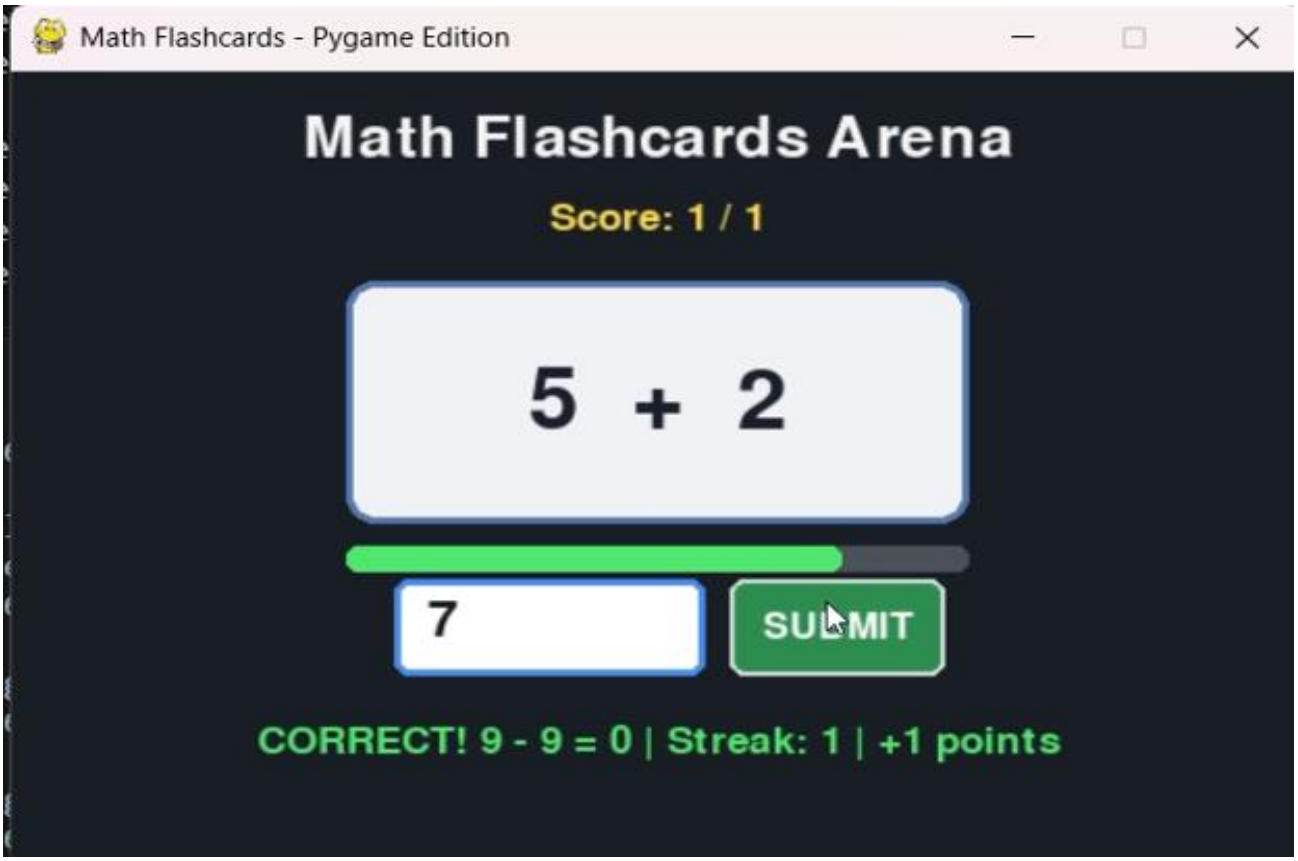

The Math Flashcards game incorrectly concatenated operands as strings instead of performing arithmetic, causing correct answers to be rejected. The game also lacked a countdown timer, consecutive-correct streak multipliers, and division problems with whole-number answers.

After Code Fixing

Arithmetic operations now calculate correctly, a countdown timer bar tracks the time remaining for each question, streak multipliers reward consecutive correct answers, and integer division generates problems without remainders. Timeout and incorrect-answer handling also reset the streak appropriately, making the game more accurate, interactive, and engaging.
