4]STORY POINT ASSIGNMENTS

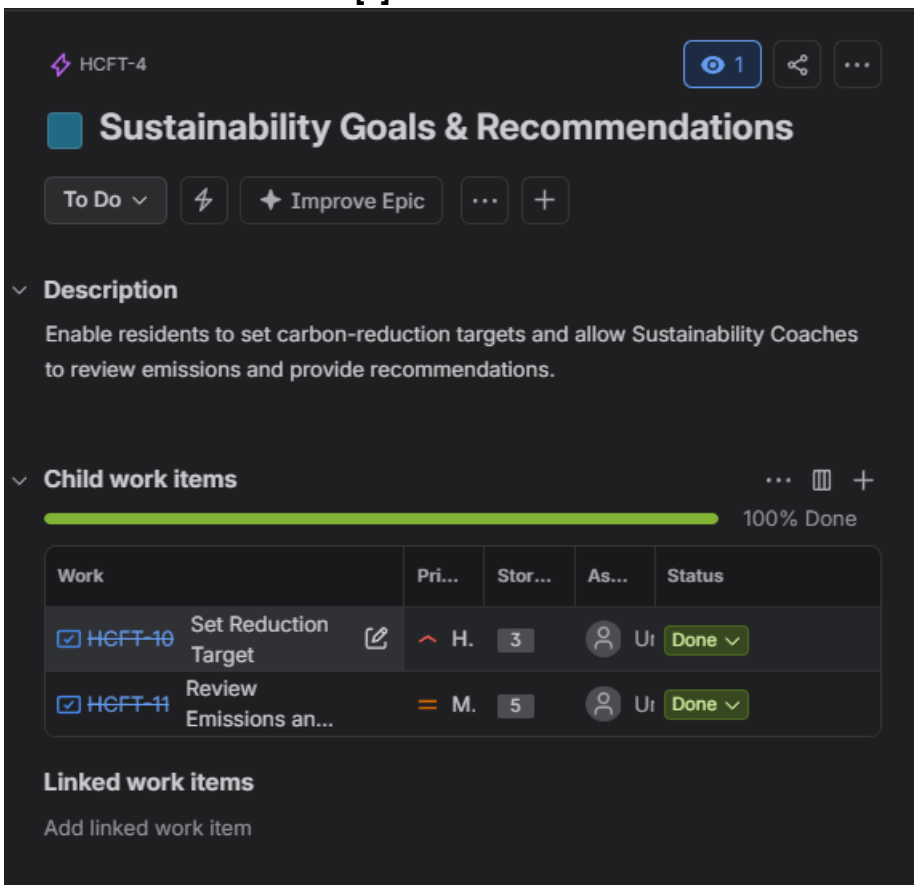

EPIC-1 STORY POINTS [9]

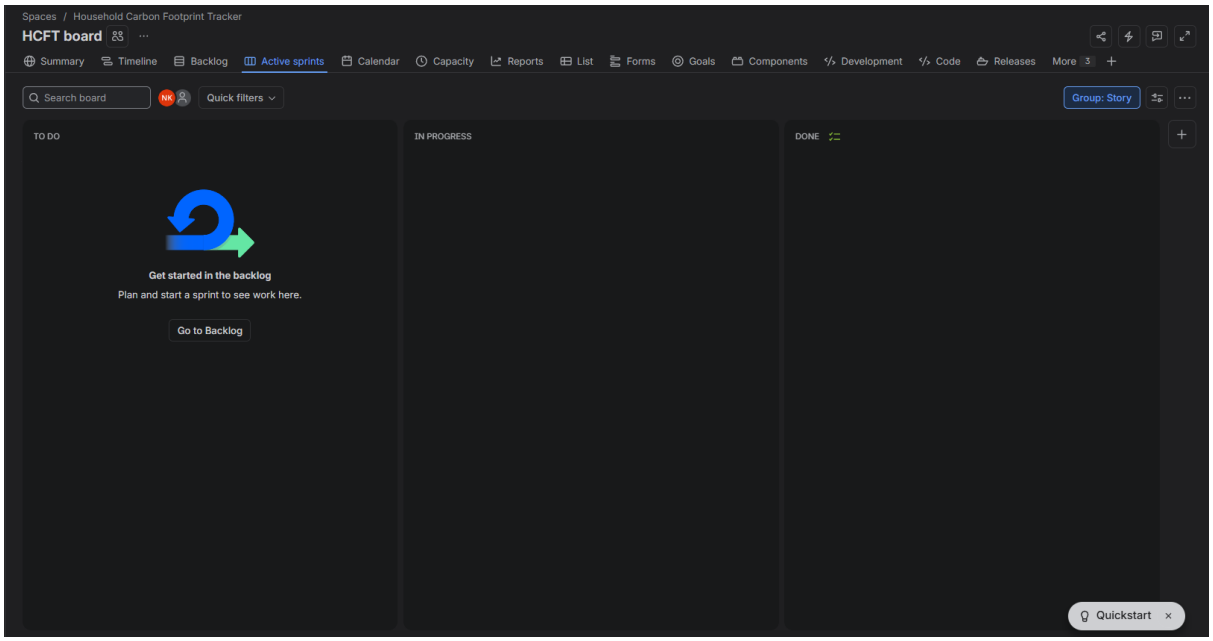

EPIC-2 STORY POINTS [8]

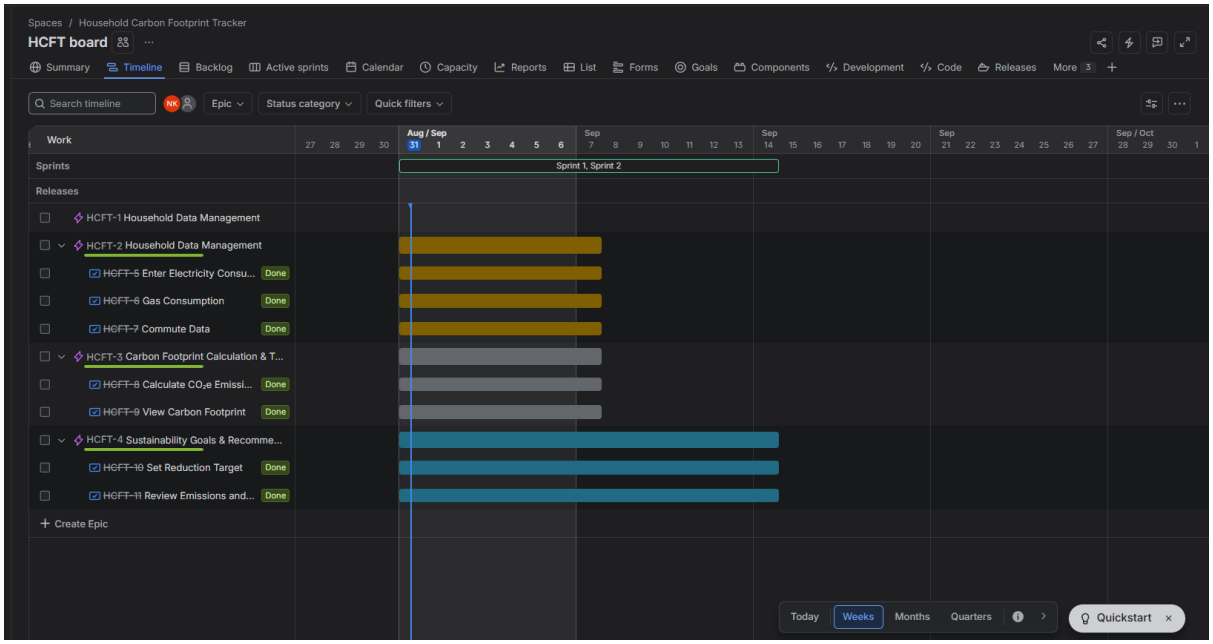

EPIC – 3 STORY POINTS [8]

5]SPRINT VIEW & REPORT [SPRINT COMPLETED]

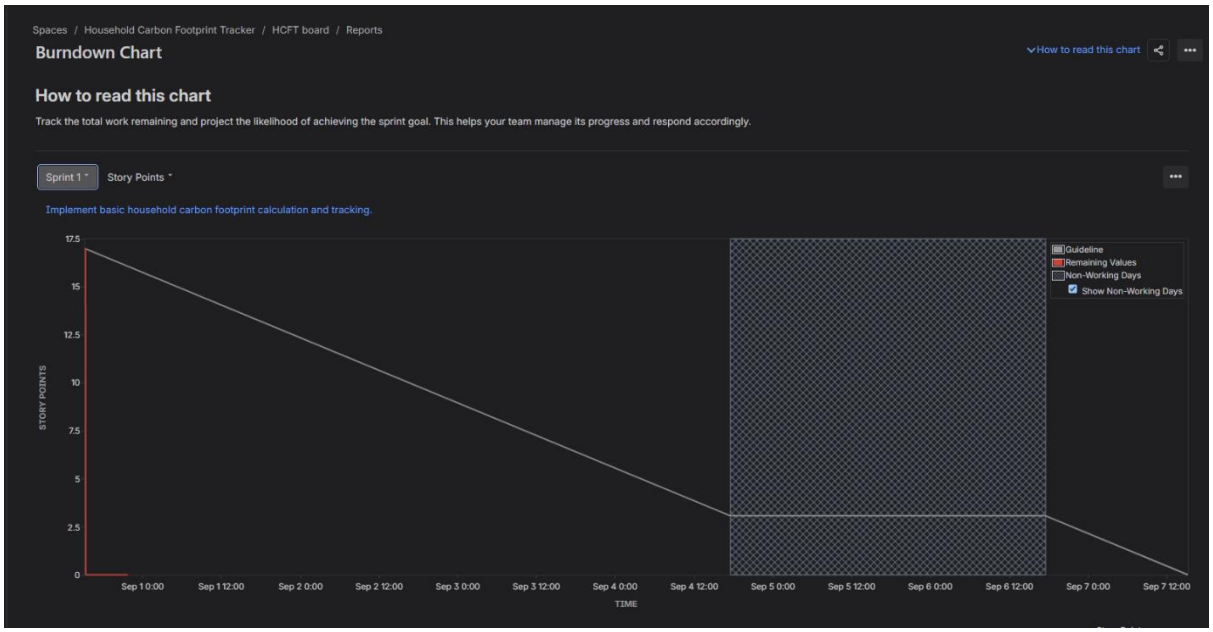

Timeline of Sprint

6]BURNDOWN CHART

Sprint – 1

Sprint – 2

7]REFLECTION

1. Did your estimations reflect the actual effort?

Yes, the story point estimations reasonably reflected the effort required. Simple data-entry stories were assigned 3 points, while the CO□e calculation and recommendation feature were assigned 5 points because they involved more complexity.

2. Was your backlog well-prioritized?

Yes, the backlog was well-prioritized. Core features such as entering household data, calculating CO□e emissions, and viewing the carbon footprint were given High priority, while recommendations were given Medium priority.

3. How did your simulated sprint align with your plan?

The simulated sprints aligned well with the plan. Sprint 1 focused on household data entry and carbon-footprint calculation, while Sprint 2 focused on reduction targets and sustainability recommendations.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed how the remaining story points decreased as work was completed. It helped visualize sprint progress and showed whether the planned workload could be completed within the sprint.
